

# VEGU Complete Product Database + Admin Control Fix

Generated: 2026-07-05

## Scope Executed

- Android failing instrumented test fixed.
- Admin product management upgraded with richer business fields and controls.
- Inventory management expanded for cost, batch, expiry, and low-stock thresholds.
- Indian grocery catalogue expanded with real categories/products and multi-store mapping.
- Schema, backend, frontend builds validated and seed executed successfully.

## Android Test Fix

- File updated:  
`frontend/android/app/src/androidTest/java/com/getcapacitor/myapp/ExampleInstrumentedTest.java`
- Assertion updated from `com.getcapacitor.app` to `com.vegu.app`.
- Validation: `gradlew testDebug` passed.

## Product and Inventory Data Model Upgrade

Prisma `Product` model was extended with owner-operational fields:

- `brand`
- `minStockAlert`
- `purchasePrice`
- `batchNumber`
- `expiryDate`

## Admin Backend Controls Added

- Admin product APIs now accept/store richer fields and image values (URL or data image).
- Separate hide/show endpoint: `PATCH /api/admin/products/:id/availability`.
- Delete endpoint now attempts hard delete and returns safe error if references exist.
- Inventory endpoint now returns pricing and batch/expiry metadata.
- Inventory update endpoint supports stock, purchase price, batch number, expiry date, and low-stock alert.

## Admin Frontend Upgrades

- `/admin/products` : fields for brand, low-stock alert, weight, purchase price, batch, expiry, hide/show, image upload input.
- `/admin/inventory` : displays cost, batch, expiry, and richer stock context.

- Accessibility and validation fixes applied to controls.

## Indian Grocery Catalogue Expansion

Seed data expanded to 14 categories and 45 products with realistic Indian quick-commerce assortment.

Category coverage includes:

- Fresh Vegetables, Fresh Fruits, Leafy Vegetables, Exotic Vegetables
- Dairy, Rice & Atta, Oil & Ghee, Masala & Spices
- Snacks, Beverages, Personal Care, Home Care, Baby Care, Pet Supplies

## Multi-Store Support in Seed

- Store 1: `Fresh Farms Direct` (Nellore baseline)
- Store 2: `VEGU Tirupati Central`
- Products are mapped to store vendor based on seed store marker.

## Validation Results

- `npm run db:push` — success
- `npm run build` (backend) — success
- `npm run build` (frontend) — success
- `npm run db:seed` — success (14 categories, 45 products)
- `gradlew testDebug` — success

## Important Notes

- Current image management supports URL/data-image input and admin replacement from product form.
- A dedicated media storage service (S3/Cloudinary/Firebase Storage) is recommended as the next step for production-grade image lifecycle and optimization.
- Real-time frontend updates remain based on current polling/react-query invalidation model; websocket-based push is a future enhancement.
